

# 904S

RANGER WHEELCHAIRS

An exceptionally powerful, mid-wheel drive power base, the Ranger 904S features a unique modular gearing system that can be adapted for high speed or high torque output. Our patented chain drive transmission allows for unparalleled performance and durability, as well as the ability to tailor each drive train to the individual requirements of the user.

The 904S, more than anything else we produce, is the answer to situations that seem impossible. The right type of 904S can tackle the steep hills and gravel roads or zip through the parkways and train stations. This is the base we use for our most challenging users and environments, with versions supporting weight capacities of 700lbs and packages designed for adventures off the beaten track. The 904S makes mobility possible no matter what your circumstances.

A chair this exceptional could only come from Ranger.
