

# RANGER BARIATRIC WHEELCHAIRS

Both our 904 [mid-wheel drive] and 706 [front-wheel drive] power bases employ the custom heavy duty gearing system only possible using our unique chain drive transmission. We offer both bases in 500 lb. and 700 lb. weight limit packages with every bariatric base fully equipped with a specially reinforced bariatric rehab seat.

It's not enough just to beef up the frame and use low-torque motors, or use a bigger seat with denser foam and a few extra inches, it's not enough to see Bariatric Power Mobility as simply being for a heavier user. Our experience has taught us that for these chairs all the parameters are different – all the preconceptions are inaccurate. Our Bariatric products extend beyond just standing up, and we create chairs that help remove limitations.

Exceptional challenges require an exceptional solution.
