

RANGER SCOOTERS

Our company was founded on the creation of one of the first power mobility scooters developed anywhere in the world, but the products were built to last even then. A lot has changed in the industry and manufacturing... modified phone controllers requiring over 200 programming steps (seriously) have given way to sophisticated computers and through it all the designs have developed and endured.

Today, in an era of mass production and multiple redundant brands our products stand out. We build the absolute strongest, most versatile, dependable scooters available; still made in Canada by the same team that helped create the industry. With unique rehab seating that accepts after market backrests and cushions, our signature fiberglass shroud decks, and the ability to customize we are still making what no one else can.

Exceptional – it's not just what we make...it's who we are.

FEATURES

- High output 750 Watt Motor / Transaxle
- Programable RHINO Controller by Dynamic
- Optional Progressive Dampened Suspension
- Rehab Seat Frame can accomodate after-market Seating
- Multiple Accessories & Custom Options
- U1, GR22 or GR24 Batteries
